Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Output

- ▶ Learned how to set up pins for output

Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Output

- ▶ Learned how to set up pins for output
- ▶ How to write to them using bit-math

Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Output

- ▶ Learned how to set up pins for output
- ▶ How to write to them using bit-math
- ▶ Did a little PWM at the end

Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Output

- ▶ Learned how to set up pins for output
- ▶ How to write to them using bit-math
- ▶ Did a little PWM at the end
- ▶ So far, done LED stuff

Review

Show and Tell

- ▶ Anyone make anything cool they want to show?

Output

- ▶ Learned how to set up pins for output
- ▶ How to write to them using bit-math
- ▶ Did a little PWM at the end
- ▶ So far, done LED stuff
- ▶ Today, let's do very simple audio

Audio

What is sound?

- ▶ Sound: repetitive compression/decompression of the air around you

Audio

What is sound?

- ▶ Sound: repetitive compression/decompression of the air around you
- ▶ Speaker: has an electromagnet inside – moves a cone forward and back depending on current running through it

Audio

What is sound?

- ▶ Sound: repetitive compression/decompression of the air around you
- ▶ Speaker: has an electromagnet inside – moves a cone forward and back depending on current running through it
- ▶ Our simple sound plan: Use the 5v/0v output we know from last week to make current flow through a speaker and make noise

Audio

What is sound?

- ▶ Sound: repetitive compression/decompression of the air around you
- ▶ Speaker: has an electromagnet inside – moves a cone forward and back depending on current running through it
- ▶ Our simple sound plan: Use the 5v/0v output we know from last week to make current flow through a speaker and make noise
- ▶ Pleasant audio frequencies from 30 Hz to 4200 Hz:
33mS to $283\mu\text{S}$ per cycle = 16mS to $140\mu\text{S}$ on/off times

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS
- ▶ How?

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS
- ▶ How?
- ▶ Make a loop that takes a fixed amount of time, toggle every n'th time through

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS
- ▶ How?
- ▶ Make a loop that takes a fixed amount of time, toggle every n'th time through
- ▶ See `scale.h` – a bunch of macros to help make musical notes

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS
- ▶ How?
- ▶ Make a loop that takes a fixed amount of time, toggle every n'th time through
- ▶ See scale.h – a bunch of macros to help make musical notes
- ▶ Middle C: Around 2mS on/off times.
 $2\text{mS} / 200 = 10\mu\text{S}$ per loop

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS
- ▶ How?
- ▶ Make a loop that takes a fixed amount of time, toggle every n 'th time through
- ▶ See `scale.h` – a bunch of macros to help make musical notes
- ▶ Middle C: Around 2mS on/off times.
 $2\text{mS} / 200 = 10\mu\text{S}$ per loop
- ▶ Should *just* work if we're not doing too much math

Simple Organ

Setting up for sound

- ▶ So want to toggle a pin every $140\mu\text{S}$ to 16mS
- ▶ How?
- ▶ Make a loop that takes a fixed amount of time, toggle every n 'th time through
- ▶ See `scale.h` – a bunch of macros to help make musical notes
- ▶ Middle C: Around 2mS on/off times.
 $2\text{mS} / 200 = 10\mu\text{S}$ per loop
- ▶ Should *just* work if we're not doing too much math
- ▶ There is a better way to do it with timers, next class...

Outline

Review and Today's Setup

Binary (logic) Input

Debouncing

Analog Input

Initialization for Input

Too easy

- ▶ To initialize for output set bit to one
DDRx = _BV(whatever)

Initialization for Input

Too easy

- ▶ To initialize for output set bit to one
DDR_x = _BV(whatever)
- ▶ For input, want to set the bit to zero instead.

Initialization for Input

Too easy

- ▶ To initialize for output set bit to one
`DDRx = _BV(whatever)`
- ▶ For input, want to set the bit to zero instead.
- ▶ But zero is the default value. Done!

Initialization for Input II

One wrinkle: Initialize a pullup

- ▶ A pullup resistor ties the input pin to 5v (internally) when it's not pulled low from outside

Initialization for Input II

One wrinkle: Initialize a pullup

- ▶ A pullup resistor ties the input pin to 5v (internally) when it's not pulled low from outside
- ▶ Often want a pullup with input

Initialization for Input II

One wrinkle: Initialize a pullup

- ▶ A pullup resistor ties the input pin to 5v (internally) when it's not pulled low from outside
- ▶ Often want a pullup with input
- ▶ Why? Simplest input circuit is a switch from pin to ground

Initialization for Input II

One wrinkle: Initialize a pullup

- ▶ A pullup resistor ties the input pin to 5v (internally) when it's not pulled low from outside
- ▶ Often want a pullup with input
- ▶ Why? Simplest input circuit is a switch from pin to ground
- ▶ AVR's PORTn does double-duty.
In output mode, controls output.
In input mode, selects the pullup

Initialization for Input II

One wrinkle: Initialize a pullup

- ▶ A pullup resistor ties the input pin to 5v (internally) when it's not pulled low from outside
- ▶ Often want a pullup with input
- ▶ Why? Simplest input circuit is a switch from pin to ground
- ▶ AVR's PORTn does double-duty.
In output mode, controls output.
In input mode, selects the pullup
- ▶ So often set PORTn to one to enable the pullup:
`PORTB |= _BV(PB3);`

Reading the Input

Reading the input register

- ▶ Input values in the PINx register

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading one pin: the most common case

- ▶ `PIND & _BV(PD3);`

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading one pin: the most common case

- ▶ `PIND & _BV(PD3);`
- ▶ If PD3 has more than 1.25v on it, we'll get 00001000

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading one pin: the most common case

- ▶ `PIND & _BV(PD3);`
- ▶ If PD3 has more than 1.25v on it, we'll get 00001000
- ▶ If PD3 has less than 1.25v on it, we'll get 00000000

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading one pin: the most common case

- ▶ `PIND & _BV(PD3);`
- ▶ If PD3 has more than 1.25v on it, we'll get 00001000
- ▶ If PD3 has less than 1.25v on it, we'll get 00000000
- ▶ Can use as a test of pin state: `if(x){...}`

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Reading one pin: the most common case

- ▶ `PIND & _BV(PD3);`
- ▶ If PD3 has more than 1.25v on it, we'll get 00001000
- ▶ If PD3 has less than 1.25v on it, we'll get 00000000
- ▶ Can use as a test of pin state: `if(x){...}`
- ▶ So let's go to the `simpleOrgan` project to see it in action

Reading the Input

Reading the input register

- ▶ Input values in the PINx register
- ▶ Can read them like `readIn = PINB;`
- ▶ `readIn` will contain an 8-bit number, each bit corresponding to the voltage state of all 8 of its pins.

Analog Input

The Real World

Switching Noise

- ▶ In reality, switches make/break contact a bunch of times as you press it

The Real World

Switching Noise

- ▶ In reality, switches make/break contact a bunch of times as you press it
- ▶ Two pieces of metal touching, bending, with different resistance all over

The Real World

Switching Noise

- ▶ In reality, switches make/break contact a bunch of times as you press it
- ▶ Two pieces of metal touching, bending, with different resistance all over
- ▶ If you're trying to make a per-button-press device, this can cause troubles

The Real World

Switching Noise

- ▶ In reality, switches make/break contact a bunch of times as you press it
- ▶ Two pieces of metal touching, bending, with different resistance all over
- ▶ If you're trying to make a per-button-press device, this can cause troubles
- ▶ Symptom: Get multiple presses for what you thought was a single press

The Real World

Switching Noise

- ▶ In reality, switches make/break contact a bunch of times as you press it
- ▶ Two pieces of metal touching, bending, with different resistance all over
- ▶ If you're trying to make a per-button-press device, this can cause troubles
- ▶ Symptom: Get multiple presses for what you thought was a single press
- ▶ Solution: Debouncing

Debouncing

Patience!

- ▶ The trick is to see if the button is still pressed some time after it was first pressed

Debouncing

Patience!

- ▶ The trick is to see if the button is still pressed some time after it was first pressed
- ▶ Couple ways to do this:
if you've already got a timing loop, just check back later
